

How CAC-T Supports the Army

- Develop and sustain the Integrated Training Environment and evolve towards a Synthetic Training Environment.
- Manage the Combat Training Center Program.
- Identify requirements for and manage more than 900,000 Army training aids, devices, simulators and simulations.
- Manage Integrated Training Area Management, Sustainable Range and Standards in Training Commission programs.
- Manage the Army Training Support System Enterprise.
- Manage requirements for Army distributed learning and mobile applications.
- Train leaders and provide Commanders the opportunity to train on Mission Command through the Mission Command Training Program.
- Manage the Army Training Network, Army Training Management System, Digital Training Management System and Combined Arms Training Strategies to provide units and leaders with training resources.
- Standardize Mission Essential Task Lists to help brigade units and higher conduct realistic training.
- Integrate the Army's Science and Technology efforts for Training and Education.
- Integrate training and education in the Agile Process and the Joint Capabilities Integration and Development System.
- Provide Army and joint air-ground operations education, training, and command and control systems integration.
- Write FM 7-0, ADP 7-0 and ADRP 7-0, the Army's key documents for unit training.
- Enhance learning in the Centers of Excellence by providing classrooms with wireless capabilities.
- Provide an enterprise Army Training Information System that optimizes leaders' and civilians' ability to plan, prepare, execute, and assess training, education and leader development.
- Lead the Evolution of Training forum with designated Centers of Excellence to expand transparency, collaborate on and synchronize development of the Army's future training capabilities.
